# Downloadterminal DLT Pro

## Easy and comfortable data handling

With the new Downloadterminal DLT Pro we simplify the unattended downloading of driver card and mass memory data via the Downloadkey even more.

The needs of bigger fleets are shaped with it and customers have the possibility to view directly the driver card's data or mass memory file, which is stored on the Download Key, directly during transfer on Downloadterminal DLT Pro. Furthermore it is possible to use a RFID chip to read out data from driver's licenses.

Via the big 3,5" TFT-colour display we support the driver or employer at his downloading activity by using a display menu with graphic symbols.

With less touches on the keypad information about driver card or mass memory download can be gathered, to make effective use of digital data for incorporation in further planning. In addition the Downloadterminal DLT Pro offers also a reminder function to point on due downloads.

The Downloadterminal DLT Pro can be used in different operating modes. It is possible to do a driver card download or transfer from Downloadkey at any

time on the Downloadterminal and to view the data without PC running. The driver's license data will only be transferred and can't be viewed at the DLT pro. The display of driver's license data will be done in TIS-Web®.

Not only these data can be transferred with an USB stick to the PC, but also connection to the USB interface up to network integration can be done easily. So the import and further processing of download data in TIS-Web® or TIS-Office® is highly simplified.

With the Downloadterminal DLT Pro data handling around the digital tachograph is more flexible and the robust design makes it very suitable for operation in the fleet. The use of Downloadterminal DLT Pro is guaranteed without specific personnel around the Clock.

Downloadterminal DLT Pro can be adapted without additional components for usage as table or wall device and so it has its comfortable place in the office area or sitting room of drivers.

# Downloadterminal DLT Pro

Easy and comfortable data handling

## Functions

- Robust solution for driver card, driver's license and Downloadkey download at any time
- Connection via LAN or USB to PC
- Operation in „Stand Alone“-mode without PC possible (data transfer via USB-stick)
- Easy data import to TIS-Web® possible
- Reminder function to show due downloads
- Meets the legal requirements for fleets (Download, archiving and visualisation of mass memory and driver card data)
- Graphical TFT-colour display 3,5"
- Basic evaluation of download data (driver and vehicle information)
- Display of driver information driving and rest time according VO (EC) No. 561/2006
- Wall - and table mounting
- Software-Update via Internet
- 256 MB internal memory, expandable up to 4 GB with USB-Stick (Option)

## System requirements

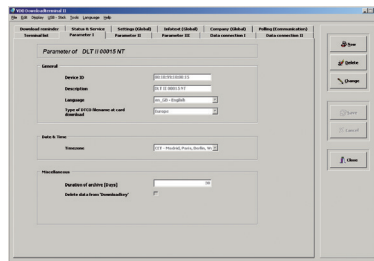

- Windows 8, Windows 7 or Windows Vista, each with actual Service Pack
- Free USB-Port or Network port (RJ45)
- Processor: at least 1,3 GHz
- Hard drive: approx. 30 MB
- 512 MB RAM

## Package content

- Downloadterminal DLT Pro
- Power supply for 100...240 Volt
- Installation and documentation CD
- Network cable RJ45 (Ethernet)
- USB cable
- Cleaning cloth for chip cards
- Cleaning card
- 4 seals
- 4 adhesive feets
